Adolescent Reproductive Health Information Support & Empowerment

ADOLESCENT GROWTH

Adolescent Growth & Development

Student Study Guide & Quiz Answer Key

Module:	Adolescent Growth
Lesson:	Adolescent Growth & Development
Quiz:	25 marks (10 MCQ + 5 Fill-in-blanks + 3 Short Answer)
Pass Mark:	15/25 (60%) — Certificate awarded at 60%+
Languages:	English Kiswahili Sheng

Learning Outcomes

By the end of this lesson, you will be able to:

1. Define adolescence and describe its three phases
2. Identify physical changes in puberty for both boys and girls
3. Explain emotional changes including mood swings and identity exploration
4. Practise healthy hygiene and self-care during puberty

Slide 2: What Is Adolescence?

Adolescence is one of the most exciting — and challenging — phases of human life. Understanding it helps you navigate it with confidence.

Phase	Age	Key Features
Early Adolescence	10–13	Puberty begins, rapid physical growth
Middle Adolescence	14–16	Peer relationships intensify, identity search
Late Adolescence	17–19	More stable identity, future planning, increasing independence

Slide 3: Physical Changes in Puberty

Puberty is driven by hormones. ALL these changes are normal — no matter when they start for you.

Change	Girls	Boys
Hair Growth	Pubic & underarm hair	Pubic, underarm & facial hair
Height	Growth spurt (earlier)	Growth spurt (later, often taller)
Body Shape	Wider hips, breast development	Broader shoulders, muscle growth
Reproductive	Menstruation begins	Sperm production, wet dreams
Both	Acne, body odour, oily skin	Acne, body odour, voice changes

■ There is **NO** right age for puberty to start. Girls typically begin 9–13, boys 11–14. Starting earlier or later than peers is **NORMAL**.

Slide 4: Emotional & Psychological Changes

The emotional changes of adolescence are just as real and significant as the physical ones.

KEY TERM: Mood Swings

Rapid changes in mood caused by hormonal fluctuations — normal and temporary. Not a sign of mental illness.

KEY TERM: Identity Exploration

The process of asking 'Who am I? What do I believe? Where am I going?' — healthy and necessary.

KEY TERM: Need for Independence

A normal developmental push to make your own decisions — while still needing adult guidance and support.

Omondi, 14, was confused by sudden mood changes — happy one hour, angry the next. His uncle explained it was normal hormonal change, not 'madness'. Knowing it was normal helped Omondi manage his emotions better and talk openly about them.

Slide 5: Hygiene & Self-Care

Good hygiene during puberty protects your health and your confidence.

■ ■ Girls' Menstrual Hygiene**Slide 6: Module Video**

Watch carefully, then continue to the scenarios.

Slide 7: Real Talk — What Would You Do?

Pick your choice and see the consequence.

Slide 8: Navigating Adolescence Well

Adolescence is not something to survive — it is something to thrive through.

Quiz — Answer Key

Total: 25 marks | Pass: 15/25 (60%) | Certificate at 60%+

Part A: Multiple Choice (10 marks)

1. 1. Adolescence is the period between:

- ☐ A. 0–5 years
- ☒ B. 10–19 years
- ☐ C. 20–30 years
- ☐ D. 30–40 years

2. 2. Puberty is triggered by:

- ☐ A. Eating too much sugar
- ☒ B. Hormones released by the brain (pituitary gland)
- ☐ C. Peer pressure
- ☐ D. School stress only

3. 3. Which is a physical change in puberty common to BOTH boys and girls?

- ☐ A. Voice breaking
- ☐ B. Breast development
- ☒ C. Growth spurt and pubic/underarm hair
- ☐ D. Menstruation

4. 4. Menstruation is:

- ☐ A. A disease that needs treatment
- ☒ B. The monthly shedding of the uterine lining when no egg is fertilised
- ☐ C. A sign of illness
- ☐ D. Caused by eating certain foods

5. 5. Testosterone is the primary hormone responsible for:

- ☐ A. Female puberty changes
- ☒ B. Male puberty changes including voice breaking, muscle growth, facial hair
- ☐ C. Emotional mood swings in girls only
- ☐ D. Controlling hunger

6. 6. Mood swings during adolescence are mainly caused by:

- ☐ A. Bad parenting
- ☒ B. Hormonal fluctuations affecting brain chemistry
- ☐ C. Social media only
- ☐ D. Poor diet alone

7. 7. A healthy response to acne (pimples) during puberty is:

- ☐ A. Squeezing and picking at them
- ☐ B. Feeling deeply ashamed
- ☒ C. Regular gentle washing and seeking medical advice if severe
- ☐ D. Using very harsh chemicals

8. 8. The identity crisis in adolescence refers to:

- ☐ A. Forgetting your name

☒ B. The process of exploring 'who am I?' — values, roles, and future

☐ C. A mental illness

☐ D. Changing schools

9. 9. Wet dreams (nocturnal emissions) in boys are:

☐ A. A sign of disease

☐ B. Caused by evil spirits

☒ C. A normal part of puberty — the body's natural release of semen

☐ D. Only happen when someone is sick

10. 10. The best support a young person can seek during adolescence is:

☐ A. Keeping all changes secret and handling them alone

☒ B. Talking to trusted adults, peers, and healthcare workers

☐ C. Searching only on social media

☐ D. Ignoring all changes

Part C: Short Answer (25 marks)

1. 1. The period of physical and psychological change between childhood and adulthood is called _____. (3 marks)

2. 2. The hormone primarily responsible for male puberty changes is _____. (3 marks)

3. 3. The monthly shedding of the uterine lining is called _____. (3 marks)

4. 4. Oily skin and pimples during puberty are caused by increased _____ production. (3 marks)

5. 5. The process of asking 'Who am I?' during adolescence is called an identity _____. (3 marks)

6. List FOUR physical changes that occur in girls during puberty. (3 marks marks) (3 marks)

7. Explain why mood swings are normal during adolescence and describe TWO healthy ways to manage them. (4 marks marks) (4 marks)

8. Why is it important for both boys and girls to understand menstruation? (3 marks marks) (3 marks)
