REPRODUCTIVE HEALTH

UTIs & Reproductive Health

Student Study Guide & Quiz Answer Key

Module:	Reproductive Health
Lesson:	UTIs & Reproductive Health
Quiz:	25 marks (10 MCQ + 5 Fill-in-blanks + 3 Short Answer)
Pass Mark:	15/25 (60%) — Certificate awarded at 60%+
Languages:	English Kiswahili Sheng

Learning Outcomes

By the end of this lesson, you will be able to:

1. Define UTIs and identify the parts of the urinary tract they affect
2. Recognise UTI symptoms and know when to seek urgent care
3. Practise daily prevention habits to reduce UTI risk
4. Explain correct antibiotic use and challenge UTI myths

Slide 2: What Is a UTI?

A UTI is one of the most common bacterial infections worldwide — and one of the most preventable. Understanding it protects your health.

KEY TERM: UTI

Urinary Tract Infection — a bacterial infection of the urinary system (urethra, bladder, ureters, or kidneys). Most are caused by *E. coli* bacteria from the bowel.

Part of Urinary Tract	Infection Name	Severity
Urethra	Urethritis	Mild
Bladder	Cystitis (most common UTI)	Moderate
Ureters	Ureteritis (less common)	Moderate–Severe
Kidneys	Pyelonephritis DANGEROUS	Severe — needs urgent care

Slide 3: Symptoms & Warning Signs

Recognising UTI symptoms early prevents serious complications.

Symptom	Description	Action
Burning urination	Painful burning or stinging when passing urine	Start hydrating; see nurse if persists
Frequent urge	Feeling the need to urinate every few minutes even after going	See a healthcare provider
Cloudy/bloody urine	Urine looks murky, pink, or red	See a healthcare provider today
Pelvic/back pain	Lower abdominal or lower back pain	Could indicate kidney involvement — see doctor
Fever + back pain	High fever with severe flank/back pain	URGENT — go to hospital (kidney infection)

■ ■ ■ Do NOT ignore

■ A burning sensation when urinating that lasts more than a day should NEVER be ignored. UTIs do not go away on their own — they can ascend to the kidneys and become life-threatening within days.

Slide 4: Prevention — Daily Habits

Most UTIs are preventable with simple, free daily habits. Start today.

■ ■ Hydration Tip

Slide 5: Treatment & When to See a Doctor

A UTI requires medical treatment — home remedies alone are not enough.

KEY TERM: Antibiotic Resistance

When you stop antibiotics early, surviving bacteria multiply and become resistant — making future UTIs much harder to treat. ALWAYS complete the full course.

Stage	Action
Mild symptoms, first day	Increase water intake, urinate often, avoid caffeine/sugary drinks
Symptoms persist beyond 24 hours	See a nurse or doctor — urine test and antibiotics if needed
Fever + severe back pain	GO TO HOSPITAL TODAY — possible kidney infection
Recurrent UTIs (3+ per year)	Specialist investigation — rule out underlying conditions

Zawadi, 15, ignored a burning sensation for a week, thinking it would pass. By day 7 she had high fever and severe back pain. She was hospitalised for 3 days with a kidney infection. Her doctor said: 'If you had come on day 1, a 3-day antibiotic course would have fixed it.' She now tells every girl: never ignore the burn.

Slide 6: Module Video

Watch carefully, then continue to the scenarios.

Slide 7: Real Talk — What Would You Do?

Pick your choice and see the consequence.

Slide 8: Myths vs Facts About UTIs

Dangerous myths about UTIs are common in Kenyan communities. Know the facts.

Myth	Fact
UTIs are STIs	Most UTIs are NOT sexually transmitted — they are caused by bowel bacteria
Only sexually active people get UTIs	Anyone can get a UTI — including children and the elderly
Cranberry juice cures UTIs	Cranberry may help prevent UTIs slightly but does NOT cure an existing infection
A UTI will go away on its own	Without treatment, UTIs worsen and can spread to kidneys
Sugar causes UTIs	Bacteria cause UTIs, not sugar directly — though high sugar environments may promote growth

Quiz — Answer Key

Total: 25 marks | Pass: 15/25 (60%) | Certificate at 60%+

Part A: Multiple Choice (10 marks)

1. 1. A UTI (Urinary Tract Infection) is:

- ☐ A. A sexually transmitted infection only
- ☒ B. An infection of any part of the urinary system by bacteria
- ☐ C. A skin condition
- ☐ D. A type of kidney stone

2. 2. The most common symptom of a UTI is:

- ☐ A. Chest pain
- ☒ B. A burning sensation when urinating and frequent urge to urinate
- ☐ C. Hair loss
- ☐ D. Rash on the skin

3. 3. Girls and women are more prone to UTIs than boys because:

- ☐ A. Their immune systems are weaker
- ☒ B. The female urethra is shorter, making it easier for bacteria to reach the bladder
- ☐ C. They drink more water
- ☐ D. They eat more sugar

4. 4. The best way to prevent a UTI is:

- ☐ A. Avoiding all liquids
- ☒ B. Drinking plenty of water, urinating frequently, and wiping front to back
- ☐ C. Taking antibiotics every week as prevention
- ☐ D. Only bathing once a week

5. 5. An untreated UTI can become dangerous if:

- ☐ A. You drink too much water
- ☒ B. The infection spreads to the kidneys (pyelonephritis)
- ☐ C. You stop eating sugar
- ☐ D. You exercise too much

6. 6. Cloudy, dark, or foul-smelling urine may indicate:

- ☐ A. Good health
- ☒ B. Dehydration or a possible UTI
- ☐ C. Too much vitamin C
- ☐ D. Normal variation only

7. 7. Which of these habits increases UTI risk?

- ☐ A. Drinking 8 glasses of water daily
- ☒ B. Holding urine for very long periods and wiping back to front
- ☐ C. Wearing cotton underwear
- ☐ D. Urinating after physical activity

8. 8. The correct treatment for a confirmed UTI is:

- ☐ A. Drinking lemon juice and hoping it clears

☒ B. A prescribed course of antibiotics completed in full

☐ C. Ignoring it until it goes away on its own

☐ D. Taking leftover antibiotics from a previous illness

9. 9. Recurrent UTIs (more than 3 per year) should be:

☐ A. Accepted as normal

☒ B. Investigated by a doctor — they may indicate an underlying condition

☐ C. Treated only with home remedies

☐ D. Reported to the school

10. 10. A simple daily habit that MOST reduces UTI risk is:

☐ A. Eating more salt

☒ B. Drinking at least 8 glasses of water daily

☐ C. Avoiding all physical activity

☐ D. Wearing very tight clothing

Part C: Short Answer (25 marks)

1. 1. The most common bacteria causing UTIs is _____, which comes from the bowel. (3 marks)

2. 2. The female urethra is _____ than the male urethra, increasing UTI risk. (3 marks)

3. 3. A kidney infection caused by an untreated UTI is called _____. (3 marks)

4. 4. The correct way to wipe after using the toilet is from _____ to back. (3 marks)

5. 5. Completing the full prescribed course of _____ is essential to treat a UTI. (3 marks)

6. List FOUR symptoms of a UTI and explain when you should see a doctor urgently. (3 marks marks) (3 marks)

7. Explain FOUR habits a teenage girl can adopt to significantly reduce her risk of UTIs. (4 marks marks) (4 marks)

8. Why is it dangerous to stop taking antibiotics for a UTI before completing the full course? (3 marks marks) (3 marks)
